ROHITASH CHOUDHARY

Software Engineer-Java Backend

+91-7611988883 | New Delhi, India | ashhh.choudhary@gmail.com | Portfolio | Linkedin | GitHub

SUMMARY

Results-driven Java Backend Engineer with 5+ years of experience building high-performance, cloud-ready microservices using Java 17, Spring Boot, and Apache Kafka. Proven track record in performance optimization (50–60% query time reduction), large-scale migration projects, and automation saving 1,080+ hours annually. Experienced in OAuth 2.0, AWS Cloud, Docker, and CI/CD pipelines. Currently upskilling in AI/LLM backend integration using Spring AI and LangChain4j to build intelligent, production-grade services.

WORK EXPERIENCE

Helpshift (A Keywords Technology) | SDE II – Core Platform (Backend) — **May 2025 — PRESENT**

- Led the design and development of a Clojure based distributed data migration framework for migrating 12TB+ of production data from ScyllaDB to YugabyteDB, optimizing data distribution and cluster scalability for distributed workloads.
- Implemented Spark based migration workflows featuring dual writes, data validation, retries, batch processing, and resumable jobs to ensure reliable and consistent migration in production
- Designed backend REST APIs for internal services, reducing average API response time by 35%.
- Collaborated on distributed architecture supporting 18+ dbs nodes, improving system scalability & fault tolerance.
- Implemented SLOs and monitoring dashboards using Prometheus and Grafana, reducing production alerts by 30% and improving on-call response time.

Amdocs | Software Development Engineer I (Backend) — **Mar 2022 — May 2025**

- Automated daily health checks for 3 enterprise applications using Selenium, Spring Boot Actuator and shell scripting, saving 1,080+ hours annually and reducing MTTR by 40%.
- Designed and delivered 20+ production-grade RESTful APIs using Spring Boot, implementing robust service and controller layers, reducing average API response time by 35%.
- Implemented OAuth 2.0 + JWT-based authentication across 8 microservices using Spring Security and CQRS enforcing role-based access at command/query level, eliminating unauthorized access and passing enterprise security audit.
- Leveraged JPA and Hibernate for ORM solutions, efficiently mapping Java objects to relational database tables, ensuring data integrity and reducing boilerplate code by 60%.
- Optimized complex SQL queries and indexing strategies in a high-traffic Oracle/MySQL application, reducing database response time by 50% and supporting 100k+ daily transactions.
- Led critical migration projects: upgraded Java 8 to Java 17, jQuery to latest LTS, and transitioned application server from WebLogic to Wild Fly, achieving 35% faster startup times with zero downtime.
- Containerized microservices using Docker and deployed on AWS EC2/ECS, reducing deployment time by 50% and improving environment consistency.
- Integrated Apache Kafka for event-driven communication between microservices, handling 50k+ messages/day with less than 10ms average latency.
- Collaborated with DevOps team to set up CI/CD pipelines using Jenkins and Git, enabling automated builds, testing, and deployments across staging and production environments.
- Participated in system design sessions, contributing HLD/LLD documents for 3 major features, ensuring scalability, resilience, and adherence to microservices' best practices.

JKTECH | Associate Consultant — **Jul 2021 — Feb 2022**

- Implemented advanced SQL indexing and partitioning strategies, reducing query execution time by 60% for large-scale datasets with 10M+ rows.
- Optimized SQL batch jobs to efficiently delete records older than 10 years, improving database maintenance cycles and reducing storage overhead by 25%.
- Developed a Python script using pandas and fuzzy matching to detect and remove duplicate database entries with 92% accuracy, improving data integrity across 5 production databases.
- Automated generation of weekly and monthly performance reports using Python and SQL stored procedures, reducing manual reporting effort by 8 hours/week.

SKILLS

- **Programming:** Java, Python, SQL. Clojure
- **Frameworks:** Spring Boot, Spring Cloud, Hibernate, JPA, Microservices, API Gateway, Service Discovery, JSP, Servlet
- **AI / LLM:** Spring AI, OpenAI API, RAG Pipelines, MCP Server, Prompt Engineering,Machine Learning
- **Application Servers**: WebLogic, WildFly, Apache Tomcat
- **Tools**: Docker, Git, JUnit, Mockito, Apache Kafka, Swagger/OpenAPI, Postman, SonarQube, Cursor, Copilot
- **Databases:** Oracle, MySQL, MongoDB, Cassandra, Yugabyte, ScyllaDB, Redis
- **Cloud & DevOps:** AWS (EC2, S3, RDS, Lambda, ECS), Jenkins, GitHub, Linux, Unix
- **Practices :** Agile, Scrum, CI/CD, TDD, REST API Design, System Design (HLD/LLD), CQRS, Circuit Breaker (Resilience4j), Microservices Architecture, Event-Driven Architecture.

EDUCATION

AMITY UNIVERSITY,RAJASTHAN — **2016-2020**

B.Tech(CSE)
